# WHY TIMBPLAS?

## UNAFFECTED BY MOISTURE

Even when permanently submerged, these profiles will retain their structural integrity - meaning they will outlast almost any product in which is it used.

## ADAPTABLE & WORKABLE

TimbPlas' versatility lies in its ability to be worked like timber, but also has the long lasting life cycle of a plastic.

## ENGINEERED PRECISION

NO KNOTS. NO TWISTING.  
NO ROTTING. NO WASTAGE.

## ENVIRONMENTALLY FRIENDLY

As it will never degrade, TimbPlas can be recycled into another type of plastic product at the end of its use.

## LIGHTWEIGHT BUT STRONG

Offering similar levels of density and strength to softwood, TimbPlas has the benefits of being extremely lightweight. Making it ideal for projects where weight may be a consideration.

## MAINTENANCE FREE

Not only does TimbPlas not require any form of treatment to make it stand the test of time, it is also 100% maintenance free.

## ENERGY EFFICIENT

TimbPlas offers a similar U-Value performance to softwood of the equivalent thickness. Replacing your existing timber structure with TimbPlas means no increase in heat loss and no thermal bridging.

## OVER 50 STANDARD PROFILES TO CHOOSE FROM

Choose from over 50 TimbPlas standard profiles, developed to match popular timber battens and planks for easy substitution.

With options from 9mm to 50mm in height and widths up to 122mm, there's a profile to suit almost any application.

## NEED A BESPOKE SOLUTION?

Our in-house tooling facility allows us to design and manufacture custom profiles quickly and cost-effectively. Simply send us your drawings and we'll provide a tailored quote within 24 hours.
